

Working together to drive the global energy transition

The IRENA Coalition for Action is a multi-stakeholder network that facilitates dialogue on industry trends, best practices and actions to accelerate the global energy transformation.

The Coalition brings together approximately 100 leading players in renewable energy, including representatives from the private sector, industry associations, civil society organisations, research institutes and international organisations. Coalition members engage on key renewable energy topics through working groups, public-private dialogues and various strategic and programmatic activities of the International Renewable Energy Agency (IRENA).

Public-Private Dialogue

Scaling up renewable energy deployment depends on continuous public-private dialogue. Recognising this, IRENA facilitates discourse and dialogue between its Member States and the Coalition for Action. As a basis for such discussion, the Coalition puts forward action-oriented white papers building on participants' various perspectives and experiences.

IRENA's annual pre-Assembly Public-Private Dialogue gathers around 250 multi-stakeholders each year. This has become a key platform for countries and the Coalition to exchange views on the latest renewable energy trends. Smaller roundtable discussions are also held between IRENA Member States and Coalition representatives.
